

Insurance Claims Performance Project - Unit 17 - Raw Data Table

What We'll Do:

-  **Create a Raw Data Page** – a straightforward page with no charts or visuals.
-  **Enable Easy Data Export** – so stakeholders can quickly export data from Power BI.
-  **Provide Direct Access to Underlying Data** – giving stakeholders a clear, unfiltered view of the data.

Written Instructions:

▼ 7a Raw Data Table

1. Creating a New Page

- Navigate to page 5 in the report.
- Rename it to **"Raw Data"**.
- Update the page title to **"Insurance Claims Raw Data"**.

Purpose: Provides a simple, unfiltered view of all data for stakeholders who want to explore the dataset without charts or visualizations.

2. Adding a Raw Data Table

1. **Insert Table Visual** on the page.
2. **Add Columns** from the Insurance Claims table:
 - **Claim_ID** → Change aggregation from **Sum** to **Don't Summarize** so each claim is listed individually.
 - **Owner**
 - **Claim_Type**
 - **Date**
 - **partition Date** → fix formatting if necessary in the data model view.
 - **Claim Status**
 - **Claim Age**
3. **Fix Date Format:**
 - Go to **Table View** → **Insurance Claims Table** → **partition Date** → **Format** → **Short Date**.
 - Return to **Report View**, ensuring all dates are readable.

Purpose: Displays all raw claim data in one table with clean formatting, making it easier to read and analyze.

3. Formatting the Table

1. **Style:**
 - Apply **Alternating Rows** for readability.
2. **Totals:**
 - Turn off totals; unnecessary for raw data.
3. **Column Headers:**
 - Change background color to Blue (**#02E53**).
4. **Values:**
 - Increase font size to utilize available space.

5. Adjust Column Widths:

- Drag columns to fill the screen.

6. Rename Columns for Clarity:

- **Claim Status True** → **Claim Status**
- **Sum of Claim Age** → **Claim Age**

7. Text Alignment:

- Align all columns to the **left** for better readability.

Purpose: Makes the table visually appealing, easy to read, and professional.

4. Sync Filters

1. **Copy filters** from previous pages (e.g., agent, claim type) and ensure synchronization.
2. **Add a new filter** for **Claim Status**:
 - Copy an existing filter.
 - Change title to **Claim Status**.
 - Change field to **Claim Status True**.
3. Users can now filter claims by **Approved, Cancelled, Declined**, etc.

Purpose: Enables users to filter and focus on specific subsets of data within the raw data table.

5. Final Adjustments

1. Ensure the table spans the entire page for easy scrolling.
2. Test filters and formatting for readability.
3. Confirm stakeholders can:
 - Filter data interactively.
 - Export the table to Excel for further analysis.

Purpose: Makes the raw data page functional for stakeholders who need detailed access to all claim records without visual summaries.

Key Power BI Techniques Used

- Table visual for raw data display.
 - “Don’t summarize” option for listing individual rows.
 - Date formatting adjustments for readability.
 - Alternating row colors and column formatting.
 - Left alignment for better readability.
 - Filters synced across pages.
 - Export-ready dataset for stakeholder analysis.
-

Summary:

The Raw Data page is a simple but essential part of the dashboard. It allows users to view every claim record, apply filters, and export data without any visualizations. This ensures transparency and enables more detailed manual analysis when needed.
